Data transfer software for force-time-measurements

Features

- Force measurements can be conducted over a very short period, i.e. seconds
- A high speed data transfer to a PC is possible (with a transfer of up to 20 data sets per second) when combining the AFH FAST with SAUTER FH, FC or FL
- AFH FAST shows the results in a Force-Time-Graph and can export the data to Microsoft Excel[®]
- Compatible with the following operating systems: Microsoft Windows 7/8.1/10

Technical data

- Data recording rate approx. 20 measurements per second with SAUTER FH, FC and FL
- The following interface cables are supplied with the product
- RS-232 für SAUTER FH (FH-A01)
- RS-232 für SAUTER FL (FL-A04)
- USB für SAUTER FL (FL-A01)

Accessories

- **II RS-232/USB adapter,** to connect peripheral devices with USB connection, SAUTER AFH 12
- **RS-232/Ethernet adapter,** for connection to an IP-based Ethernet network, SAUTER YKI-01
- RS-232/PC connection cable to connect models from the SAUTER FC range to a PC, SAUTER FC-A01

SAUTER CATALOGUE 2020

Pictograms

Adjusting program (CAL): For quick setting of the instrument's accuracy. External adjusting weight required.

Calibration block:

standard for adjusting or correcting the measuring device.

Peak hold function: capturing a peak value within a measuring process.

continuous capture and display of measurements

Push and Pull:

Scan mode:

Length measurement:

captures the geometric dimensions of a test object or the movement during a test process.

SCALE

Focus function:

increases the measuring accuracy of a device within a defined measuring range.

Internal memory:

to save measurements in the device memory.

Data interface RS-232:

bidirectional, for connection of printer and PC.

Data interface USB:

To connect the measuring instrument to a printer, PC or other peripheral devices.

WLAN data interface:

To transfer data from the balance to a printer, PC or other peripherals.

Data interface Infrared:

To transfer data from the measuring instrument to a printer, PC or other peripheral devices.

Your KERN specialist dealer:

Control outputs (optocoupler, digital I/O): to connect relays, signal lamps, valves, etc.

to connect a suitable peripheral device for ANAL OG analogue processing of the measurements

using the saved values, the device calculates STATISTIC statistical data, such as average value, standard deviation etc.

to transfer the measurement data from the device to a PC

a printer can be connected to the device to PRINT print out the measurement data.

Network interface: Ċ

For connecting the scale to an Ethernet LAN network.

KCP
PROTOCO

KERN Communication Protocol (KCP): It is a standardized interface command set for KERN balances and other instruments, which allows retrieving and controlling all relevant parameters and functions of the device. KERN devices featuring KCP are thus easily integrated with computers, industrial controllers and other

GLP/ISO record keeping:

of measurement data with date, time and serial PROTOCOL number. Only with SAUTER printers

Measuring units:

digital systems.

Weighing units can be switched to e.g. non-metric at the touch of a key. Please refer to website for more details.

Measuring with tolerance range

(limit-setting function): Upper and lower limiting can be programmed individually. The process is supported by an audible or visual signal, see the relevant model

FAST-MOVE

The mechanical movement is carried

out by a synchronous motor (stepper).

the total length of travel can be covered by a single lever movement.

DAkkS calibration possible:

The time required for DAkkS calibration is shown in days in the pictogram.

Factory calibration:

The time required for factory calibration is specified in the pictogram.

Package shipment:

1 DAY

The time required for internal shipping preparations is shown in days in the pictogram.

Pallet shipment: The time required for internal shipping

preparations is shown in days in the pictogram.
